Individual Accountability Report (IAR)

Student Name: O'Neal Yako
Student ID: 1003370
Associated Team Deliverable: Sprint 3
Section#, Team#: Section 1 Group 6

Q5: What were the main technical or methodological concepts and/or skills that were required to complete this team deliverable?

- Understanding XML and the Spinner feature (dropdown)
- Trying to get drop down feature selection to work

Q6: What was your existing level of experience with these topics/skills before your team began working on this deliverable? (1-2 Sentences):
My experience with Android development in general was not high prior to this course. However, after doing some research, I was able to understand Spinners and their implementation for my deliverable.

Q7: Comment on your individual academic, methodological, or technical learning during this deliverable, and what additional learning may be needed to understand or be more competent with these topics in the future?
I feel like I learned a lot about Spinners and the user interface design aspect. However, one thing I need more time with is understanding how to connect the back end component in regards to the location marker with the user's selection from the dropdown menu.

Q8: What specific contributions did you make to this team deliverable? This should include technical or project management contributions.
I specifically contributed to the the dropdown menu for the location marker colour. However, it was not delivered in this specific sprint and instead, pushed to the final sprint due to the length and time needed to complete the task.

Q9: With who did you collaborate for any of the above contributions (be specific)?
For this specific task, I have worked on it myself.

Q10: Comment on how well you managed your time over the time period allocated in the course timetable to this team deliverable (ie. the time between the prior team deliverable to this team deliverable).
My time management was good however, due to my full-time co-op job on top of three other classes (including this one), I was not able to spend as much time as I would liked to when it came to getting the backend to work properly with the front end design.
